RESOURCES AND AI REFLECTION

Student / Team ID: 22961-2

Name of Competitive Event: Webmaster

Level: ☑ High School ☐ Middle School

RESOURCES

1. **Program Resources Used:**
   List software, programs, online resources, or apps, specific to this event, you used to complete your project.

Claude	Khan Academy
Git (GitHub Copilot)	Google Docs
Figma	Google Meet
Brilliant.org	

Did you use artificial intelligence (AI) in the development/production of your project? ☑ YES ☐ NO

If NO, complete questions 2 and 3.
If YES, complete questions 4 through 8.

IF NO AI,

2. **Processes and Functions Performed:**
   Describe how you used each resource and what role it played in your work.

3. **Effectiveness:**
   Reflect on how well your chosen resources supported your project. What worked well? What would you do differently?

IF YES AI,

4. **Format of AI Use:** Select one

☐ Generative (used AI to create text, images, or other content)
☐ Informative (used AI to research or gather information)
☑ Both
☐ Other: _____

continued on other side

5. **AI Tool(s) Used:** Name the specific AI tool(s) you used.

GitHub Copilot (code autocomplete)

Claude (Anthropic)

6. **AI Use Explanation:** Complete questions, specific to this event, below:

Context: What background information did you give the AI to guide its response? (e.g. target audience, tone, project requirements, or constraints)

Our team designed the site ourselves. We made every wireframe in Figma and agreed on the outline, the look and feel, and the gamification system in our planning doc before any AI was involved. When we did use AI, we gave it our README with the challenge requirements and our own finished design.

Role: What specific role did you use AI for (e.g., brainstorming, research support, drafting, debugging)?

Limited coding support. This site was not built by prompting an AI and accepting what came out. AI had three narrow uses: a one-time scaffold that converted our finished design into a starting Svelte project, Copilot autocomplete while we typed our own code, and occasional consulting when we wanted a second opinion on an optimization or were stuck on a bug.

Action and Outcomes: Summarize the specific task(s) you ask the AI to perform?

The scaffold gave us the project setup and basic page structure in our first commit, and the exact prompt is published in our README. Copilot completed lines and repetitive patterns in code we were already writing. Consulting gave us suggestions that we chose to apply or ignore. The design, lesson content, interactive models, and gamification logic are our own work.

7. **Effectiveness:** How did you evaluate the reliability and usefulness of the AI responses? What changes or decisions did you make to the AI-generated content to improve or refine it? Did you experience incorrect or misleading information?

We treated AI output as a suggestion to check. We compared the scaffold to our Figma wireframes page by page, and we read the code before building on it, because three of us had to extend it. We accepted Copilot completions only when they matched what we were already writing. Overall, AI saved us typing and setup time, but it did not make design or teaching decisions for us.

8. **Ethical Reflection:** Explain how your use of AI was appropriate and ethical for this project.

Consider the following as example questions to consider in this response:
How did you ensure that the final work represents your own ideas, understanding, and creativity rather than AI-generated content? How did you avoid over-reliance on AI or using it in a way that could be considered unethical?

Our ideas came first. Each member wrote their own section of our planning doc, we merged those into the final outline, and we designed the site in Figma ourselves. AI only helped us implement decisions we had already made.

We also disclosed the AI use we did have, even though it was small. The scaffold prompt is in our README, that commit is still attributed to Claude in our Git history, and AI is credited on our references page. Our site teaches students to check AI answers, trace sources, and be honest about AI in schoolwork, so we held ourselves to the same standard. To avoid over-reliance, each of us can explain the code we own.

**Applicable to the High School Competitive Events Guide for the 2027 & 2028 National TSA Conferences*
